SUMMARY

I am a final year Ph.D. student at IIT Kharagpur, India, and will tentatively submit my Ph.D. thesis around July 2024. I am **currently looking for postdoctoral researcher** positions starting from August 2024, in the broad domain of “Artificial Intelligence in Medicine” with a focus on natural language processing. I am particularly passionate about interdisciplinary research related to medical NLP, fast pretraining of gene transformer models and adapting LLMs for medical question-answering and summarization, particularly in limited data settings.

RESEARCH EXPERIENCE

L3S Research Center, Leibniz University Hannover, Germany

- Worked as a Research Associate in *International Leibniz Future Laboratory for Artificial Intelligence* with Prof. Wolfgang Nejdl. Here, I worked on the Parkinson’s Disease medical use case where we developed a decision tree-based patient subtyping method for Parkinson’s Disease, in collaboration with the Hannover Medical School. Additionally, I played the role of the point-person to organize the meetings and coordinate the reports for this use-case. Jan 2021 – Jun 2023

Indian Institute of Technology Kharagpur, West Bengal, India

- Selected for the Indian Academy of Sciences Summer Research Fellowship Programme to work with Prof. Sudeshna Sarkar of the Computer Science and Engineering Department on the project topic ”Anomaly Detection and Summarization of various Extreme Weather Events over Indian sub-continent”. Here, we formulated the extreme weather event detection problem as an anomaly detection problem over spatiotemporal weather datasets and used cSTAG, a graph-based algorithm for identifying patterns of correlated change to detect extreme weather events. Jun 2016 – Jul 2016

Adobe Big Data Experience Lab, Bangalore, India

- Worked as a Summer Research Intern with Mr. Anandhavelu Natarajan and Dr. Niyati Chhaya of the Adobe Big Data Experience Lab Bangalore on the topic ”Predicting Brand Personality from Web Content”. Here, we developed a deep learning-based brand personality classification model and constructed a labeled brand personality detection dataset using company webpages by annotating with the Amazon Mechanical Turk platform. May 2018 – Jun 2018
